Remote Switch Actuator: Charge-Close-Trip

The Remote Switch Operator III control console allows your service personnel the ability to remotely Charge, Close, and Trip your circuit breakers outside the arc flash hazard boundary. Radio Remote is the newest option. This option allows the personnel to Charge, Close, and Trip up to 150 feet away from the breaker.

Many breaker designs to choose from.

General Electric AK-2-25

The Remote Switch Actuator: Charge-Close-Trip attaches to the front of your circuit breaker with strong magnets without the need for any modification to your switchgear. This actuator allows service personnel to operate all three actions without having to stand in the arc flash hazard boundary to charge, close or trip the equipment. Once the actuator is attached and have determined the

breaker is not previously charged the directions are simple: 1. Push Charge Button. 2. Push Close button. 3. Push Trip Button.
